

Experience

Senior Software Engineer	Hypernatural (BitComplete)	Mar 2025 - Present
--------------------------	----------------------------	--------------------

Contracted by BitComplete to Hypernatural; Worked on AI product and owned much of web monetization, infrastructure, and developer-tooling

- Launched an OAuth-enabled MCP server for AI video creation and editing; within three weeks, MCP signups converted at 2.7x the non-MCP rate and generated 20% of new-user MRR
- Stood up PR preview environments and Claude Code Web integration that seeded agentic workflows across the team; merged PRs per contributor rose 32% and non-engineer PRs grew 8x in the following quarter
- Gave agents and non-engineers safe production-data access through a Metabase MCP over a PII-safe read-only follower, replacing guesses and risky queries against the primary
- Owned Stripe payments end to end, from team subscriptions, trials, and credit top-ups to plan changes, and tripled international revenue with dynamic regional pricing
- Decommissioned a \$1,000/month database by migrating vector search from pgvector on AWS RDS to S3 Vectors
- Sped up CI tests 2.25x and TypeScript formatting 20x by eliminating unnecessary password hashing, loading the DB from snapshots, and replacing Prettier with BiomeJS
- Promoted to Senior Software Engineer in March 2026 after one year

Python, Django, React, TypeScript, PostgreSQL, AWS, Terraform, Stripe, MCP, Playwright

Software Engineer	Dropbox	Aug 2022 - Nov 2024
-------------------	---------	---------------------

- Migrated 300+ engineers from Phabricator to GitHub while preserving review and compliance workflows
- Built a self-service rules engine that assigned reviewers, commented on code changes, and enforced configurable merge conditions
- Built a Go CLI and webhook services for managing pull requests and enforcing code-owner reviews across GitHub and CI

Go, Python, Bazel

Software Engineer	Motive (formerly KeepTruckin)	Nov 2020 - Aug 2022
-------------------	-------------------------------	---------------------

- Cut CI/CD time 85%, from more than 40 minutes to 5, through caching and selective application deployments
- Unified AWS Lambda and Kubernetes deployments with a custom controller and Bazel rules integrated with Argo CD
- Cut IoT log volume 50%, saving thousands of dollars per month
- Designed a versioned, priority-aware IoT job pipeline across AWS IoT Core, Lambda, DynamoDB, Kafka, and Protobuf

Go, Python, Ruby on Rails, Kubernetes, AWS, Bazel, Kafka, Protobuf

Software Engineer	Infoblox	Jul 2019 - Nov 2020
-------------------	----------	---------------------

- Cut developer time spent on health checks 75% by replacing a manual application with Prometheus and Kubernetes service discovery
- Led end-to-end distributed tracing for asynchronous multi-service workflows, improving observability and incident resolution
- Cut production Docker image size about 40% through multi-stage builds and dependency cleanup

Go, PostgreSQL, Docker, Kubernetes, AWS, Prometheus, OpenTracing

Education

Vancouver, BC	University of British Columbia	Sep 2013 - May 2019
---------------	--------------------------------	---------------------

- Bachelor of Applied Science in Mechanical Engineering

Volunteer

Lead Software Engineer	FTLO Volleyball	Apr 2026 - Present
------------------------	-----------------	--------------------
